II ACCOUNTING PERIOD AND ACCOUNTING CURRENCY

1 Annual accounting period: The annual accounting period of the Group is from 1 January to 31 December.

2 Accounting and presentation currency

The Company's accounting currency is Vietnam Dong ("VND")

III BASIS OF PREPARATION

1 The basis for the preparation of consolidated financial statements and applicable accounting standards and system

The company applies the Vietnamese Enterprise Accounting System issued in accordance with the Circular 200/2014/TT-BTC dated 22 December 2014 ("Circular 200"), Circular 53/2016/TT-BTC dated 21 March 2016 amending and supplementing certain provisions of Circular 200 of the Ministry of Finance guiding the enterprise accounting system, and Circular 202/2014/TT-BTC dated 22 December 2014 guiding the method of preparation and presentation of consolidated financial statements.

The consolidated financial statements are stated at cost and in accordance with Vietnamese Accounting Standards. The accompanying consolidated financial statements are not intended to reflect the consolidated financial position, consolidated results of operations, and consolidated cash flows in accordance with the principles and accounting practices generally accepted in countries outside of Vietnam.

2 Representation on the accounting standards and system compliance

The Board of Management ensures that the consolidated financial statements have been prepared and presented in compliance with the requirements of Vietnamese Accounting Standards, the Vietnamese Accounting System for enterprises, and the relevant statutory requirements applicable to financial reporting.

IV ACCOUNTING POLICIES

The following are the principal accounting policies applied by the Company in the preparation of the consolidated financial statements. These accounting policies are consistent with those applied in the preparation of the consolidated financial statements for the most recent fiscal year.

1 Basis of consolidation

The consolidated financial statements are prepared on the basis of consolidating the financial statements of the parent company and its subsidiaries for the accounting period ended on 30 June 2025.

The subsidiary is fully consolidated from the acquisition date, which is the date the Group obtains control over the subsidiary, and continues to be consolidated until the date that control ceases.

The financial statements of the Company and its subsidiaries used for consolidation are prepared for the same accounting period and apply consistent accounting policies.

Balances of accounts on the balance sheet between entities within the same Group, income and expenses, and unrealized gains or losses arising from these transactions are fully eliminated.

The interests of non-controlling interests represent the share of profits or losses and the net assets of the subsidiary not held by the Group and are presented separately in the consolidated income statement and in the equity section of the consolidated balance sheet.

The effects of changes in the ownership interest of a subsidiary that do not result in the loss of control are accounted for in retained earnings.

2 Cash and Cash equivalents

Cash and cash equivalents include cash on hand, cash at bank and short term, highly liquid investments with an original maturity of less than 3 months that are readily convertible into known amounts of cash and that are subject to an insignificant risk of change in value.

3 Receivables

Receivables are presented in the consolidated financial statements at the carrying amounts due from customers and other debtors, after provision for doubtful debts.

The bad debt allowance represents the estimated loss due to non-payment arising on receivables that were outstanding at the balance sheet date. Increases and decreases to the allowance balance are recorded as general and administrative expense in the consolidated financial statements. When receivables are determined to be uncollectible and the accountant writes off the debt, the difference between the allowance for doubtful accounts and the original amount of the receivable is recognised in the consolidated income statement.

4 Inventories

Inventory is valued at cost. The cost of inventory includes purchase costs, costs of conversion (including materials costs, direct labor costs, other directly related costs, and allocated overhead costs based on normal operating levels) to bring the inventory to its present location and condition.

If the net realisable value is lower than the cost, the inventory must be valued at net realisable value.

Net realisable value is the estimated selling price of inventory items, less the estimated costs of completion and estimated costs to sell.

The group applies the perpetual method to account for inventory, with the value determined as follows:

- | | |
|---|---|
| + Raw materials, tools and supplies, and merchandises | - Purchase costs and inventory issue prices are determined using the weighted average method. |
| + Finished goods, merchandises, and work-in-progress costs. | - The cost of finished goods, semi-finished products, and merchandises is determined using the weighted average method. |

Method for calculating and recognising allowance for inventory: The allowance for inventory is calculated and recognised for the diminution in the value of inventory (such as price reductions, damage, poor quality, obsolescence, etc.) that may occur for the Group's raw materials, finished goods, and other inventories, based on reasonable evidence of value diminution as of the end of the accounting period.

Increases or decreases in the allowance for inventory are recorded in the cost of goods sold in the consolidated income statement. When inventory is written off due to expiration, loss of quality, damage, or lack of utility, any differences arising between the recognized allowance for inventory and the historical cost of the inventory are recorded in the consolidated income statement.

5 Tangible fixed asset

Tangible fixed assets are stated at cost less accumulated depreciation.

The cost of a tangible fixed asset comprises of its purchase price and any directly attributable costs of bringing the tangible fixed asset to working condition for its intended use. Expenditures for additions, improvements and renewals are added to the carrying amount of the assets and expenditures for maintenance and repairs are charged to the separate income statement as incurred.

When tangible fixed assets are sold or retired, any gain or loss resulting from their disposal (the difference between the net proceeds from the sale and the carrying amount of the asset) is included in the consolidated income statement.

6 Finance leases

The determination of whether an arrangement is a lease is based on the substance of the arrangement at the inception date: whether the fulfillment of the arrangement is dependent on the use of a specific asset and whether the arrangement conveys the right to use the asset.

A lease is classified as a finance lease if the lease transfers substantially all the risks and rewards incidental to ownership of the asset to the lessee. All other leases are classified as operating leases.

Assets under finance leases are capitalised on the consolidated balance sheet at the inception of the lease at the lower of the fair value of the leased asset and the present value of the minimum lease payments. The principal portion of future lease payments under finance leases is recognised as a liability. The interest portion of lease payments is recognized in the consolidated income statement over the lease term at the interest rate implicit in the lease, applied to the outstanding balance of the lease liability.

Capitalised finance lease assets are depreciated on a straight-line basis over the shorter of the estimated useful life and the lease term, unless it is reasonably certain that the lessee will obtain ownership of the asset by the end of the lease term.

Lease payments under operating leases are recognized in the consolidated income statement on a straight-line basis over the lease term.

7 Intangible fixed assets

Intangible fixed assets are stated at cost less accumulated amortisation. Intangible fixed assets include: land use rights, software, and other intangible fixed assets.

The cost of an intangible fixed asset comprises of its purchase price and any directly attributable costs of preparing the intangible fixed asset for its intended use. Expenditures for additions, improvements are added to the carrying amount of the assets and other expenditures are charged to the consolidated income statement as incurred.

When intangible fixed assets are sold or retired, any gain or loss resulting from their disposal (the difference between the net proceeds from the sale and the carrying amount of the asset) is included in the consolidated income statement.

8 Depreciation and amortisation

Depreciation and amortisation of tangible and intangible assets are calculated on a straight-line basis over the estimated useful life of each asset as follows:

Buildings and structures	2 - 50 years
Machineries and equipment	2 - 20 years
Motor vehicles	3 - 30 years
Office equipment	2 - 20 years
Land use rights	Over the lease term
Software	3 - 8 năm

Depreciation of finance leases is calculated over the lease term specified in the contract as follows:

Machineries and equipment	5 - 15 years
Motor vehicles	5 - 10 years

9 Borrowing costs

Borrowing costs consist of interest and other costs that the Company incurs in connection with the borrowing of funds. Borrowing costs are recorded as expense during the period in which they are incurred, except to the extent that they are capitalized as explained in the following paragraph.

Borrowing costs that are directly attributable to the acquisition, construction or production of an asset that necessarily take a substantial period of time to get ready for its intended use or sale are capitalized as part of the cost of the respective asset.

10 Prepaid expenses

Prepaid expenses are reported as short-term or long-term prepaid expenses on the consolidated balance sheet and amortised over the period for which the amount are paid or the period in which economic benefit are generated in relation to these expenses.

The following expenses are recorded as prepaid expenses to be amortised over 1 to 5 years or recognised in accordance with revenue in the consolidated income statement:

- Tools and supplies;
- Costs of outsourced services;
- Water meters;
- Major overhaul cost; and
- Other expenses related to multiple operating cycle.

11 Business combinations and goodwill

Business combinations are accounted for using the acquisition method. The cost of a business combination includes the fair values, at the date of exchange, of assets given, liabilities incurred or assumed, and equity instruments issued by the acquirer in the acquisition in exchange for control of the acquiree and any costs directly attributable to the business combination. Identifiable assets acquired, identifiable liabilities and contingent liabilities assumed in a business combination are recognised at fair value at the acquisition date.

Goodwill arising from a business combination is initially recognised at cost, which is the excess of the cost of the business combination over the Group's interest in the net fair value of the identifiable assets, liabilities, and recognised contingent liabilities. If the cost of the business combination is less than the fair value of the acquiree's net assets, the difference is recognised directly in the consolidated statement of profit or loss. After initial recognition, goodwill is measured at cost less accumulated amortisation. Goodwill is amortised on a straight-line basis over ten (10) years, which represents the period during which the Group is expected to derive economic benefits. Periodically, the Group assesses goodwill for impairment at its subsidiaries. If evidence indicates that the impairment exceeds the annual amortisation amount, the impairment amount is immediately recognised in the year it arises.

12 Asset acquisition and business combination

The Group acquires subsidiaries that own assets and engage in business operations. At the acquisition date, the Group assesses whether the acquisition of the subsidiary constitutes a business combination. A transaction is classified as a business combination if the subsidiary's acquired assets are accompanied by business operations.

If the acquisition of the subsidiary does not meet the criteria for a business combination, the transaction is accounted for as the acquisition of a group of assets and liabilities. The purchase consideration is allocated to the assets and liabilities based on their respective fair values, with no recognition of goodwill or deferred tax liabilities.

13 Investments***Investments in Associates***

Investments in associates are accounted for using the equity method. Associates are entities over which the Group has significant influence but are neither subsidiaries nor joint ventures of the Group. Significant influence is generally presumed to exist when the Group holds at least 20% of the voting rights in the investee.

Under the equity method, investments are initially recognised at cost in the consolidated balance sheet and subsequently adjusted for the Group's share of post-acquisition changes in the net assets of the associate. Goodwill arising from the acquisition of an associate is included in the carrying amount of the investment. This goodwill is not amortised but is assessed annually for impairment.

The Group's share of the associate's post-acquisition profit or loss is recognised in the consolidated income statement, and its share of post-acquisition movements in other reserves is recognised in the relevant reserves. Cumulative post-acquisition changes are adjusted against the carrying amount of the investment in the associate. Dividends received from an associate are deducted from the carrying amount of the investment.

The financial statements of associates are prepared for the same reporting period as those of the Group and are adjusted to ensure consistency with the Group's accounting policies, where necessary. Appropriate consolidation adjustments are made to align any differences in accounting policies with those of the Group.

14 Payable and Accrual

Payables and accruals are recognised for amounts to be paid in the future for goods and services received, whether or not billed to the Company.

15 Provisions

The Group recognises provisions when there is a present obligation (legal or constructive) as a result of a past event, where the settlement of the obligation is expected to result in an outflow of economic benefits and the Group can reliably estimate the amount of the obligation.

The provision for warranties are recognised for each type of product or good under warranty commitments.

16 Appropriation of net profits

Net profit after tax (excluding gains from bargain purchases) is available for appropriation to shareholders after approval by the shareholders in a General Shareholders' meeting, and after making appropriation to reserve funds in accordance with the Company's Charter and the Vietnamese regulatory requirements.

The Company maintains the following reserve funds which are appropriated from the Company's net profit as proposed by the Board of Directors and subject to approval by shareholders at the annual general meeting.

Bonus and Welfare Fund

This fund is established to provide rewards and incentives, bring shared benefits, and improve employee welfare, and it is presented as a payable item on the consolidated balance sheet.

17 Earnings per share

Basic earnings per share is calculated by dividing the profit after tax attributable to the Company's ordinary shareholders (after adjusting for the appropriation to the bonus and welfare fund) by the weighted average number of ordinary shares outstanding during the year.

Diluted earnings per share is calculated by dividing the profit after tax attributable to the Company's ordinary shareholders (after adjusting for dividends on convertible preference shares) by the sum of the weighted average number of ordinary shares outstanding during the year and the weighted average number of ordinary shares that would be issued upon conversion of all potentially dilutive ordinary shares into ordinary shares.

18 Foreign currency transactions

Transactions in currencies other than the Company's reporting currency of [VDN/US\$] are recorded at the exchange rates ruling at the date of the transaction. At the end of the period, monetary assets and liabilities denominated in foreign currencies are translated as follow:

- Transactions resulting in accounts receivable shall be recorded at the buying exchange rate of the commercial bank designated by the Group for customer payments; and
- Transactions resulting in accounts payable shall be recorded at the selling exchange rate of the commercial bank where the Group anticipates conducting the transaction.

At the end of the period, monetary assets and liabilities denominated in foreign currencies are translated at the actual exchange rate on the date of the consolidated balance sheet in accordance with the following principles:

- cash and receivable accounts are revalued at buying exchange rate announced by the commercial bank where the Company maintains bank accounts ruling at the balance sheet date.
- payable accounts are revalued at selling exchange rate announced by the commercial bank where the Company maintains bank accounts ruling at the balance sheet date.

All foreign exchange differences are taken to the consolidated income statement

19 Revenue Recognition

Revenue is recognised to the extent that it is probable that the economic benefits will flow to the Group and the revenue can be reliably measured. Revenue is measured at the fair value of the consideration received or receivable, excluding trade discount, rebate and sales return. The following specific recognition criteria must also be met before revenue is recognised:

Revenue from sale of goods

Revenue from the sale of goods is recognised when the significant risks and rewards of ownership have been transferred to the buyer, which typically coincides with the time of delivery.

Revenue from rendering of services

When the outcome of a contract can be reliably determined, revenue is recognized based on the stage of completion of the work.

If the outcome of a contract cannot be reliably determined, revenue is recognized only to the extent that the recoverable costs incurred have been recorded.

Interest income

Revenue for the interest income is recognised on the accrued basis (including the profit derived from the assets) unless the collection of the interests is uncertain.

Dividends

Income is recognised when the Company's entitlement as an investor to receive the dividend is established.

20 Taxation

Current income tax

Current income tax assets and liabilities for the current and prior years are measured at the amount expected to be recovered from or paid to the taxation authorities. The tax rates and tax laws used to compute the amount are those that are enacted as at the balance sheet date.

Current income tax is charged or credited to the consolidated income statement, except when it relates to items recognised directly to equity, in which case the current income tax is also dealt with in equity.

Current income tax assets and liabilities are offset when there is a legally enforceable right for the Group to set off current tax assets against current tax liabilities and when the Group intends to settle its current tax assets and liabilities on a net basis.

Deferred tax

Deferred tax is provided using the liability method on temporary differences at the balance sheet date between the tax base of assets and liabilities and their carrying amount for financial reporting purposes.

Deferred tax liabilities are recognised for all taxable temporary differences. Deferred tax assets are recognised for all deductible temporary differences, carried forward unused tax credit and unused tax losses, to the extent that it is probable that taxable profit will be available against which deductible temporary differences, carried forward unused tax credit and unused tax losses can be utilised.

The carrying amount of deferred income tax assets is reviewed at each balance sheet date and reduced to the extent that it is no longer probable that sufficient taxable profit will be available to allow all or part of the deferred income tax asset to be utilised. Previously unrecognised deferred income tax assets are re assessed at each balance sheet date and are recognised to the extent that it has become probable that future taxable profit will allow the deferred tax assets to be recovered.

Deferred income tax assets and liabilities are measured at the tax rates that are expected to apply in the period when the asset realised or the liability is settled based on tax rates and tax laws that have been enacted at the balance sheet date.

Deferred tax is charged or credited to the income statement, except when it relates to items recognised directly to equity, in which case the deferred tax is also dealt with in the equity account.

Deferred tax assets and liabilities are offset when there is a legally enforceable right for the Group to set off current tax assets against current tax liabilities and when they relate to income taxes levied by the same taxation authority on either the same taxable entity, or when the Group intends either settle current tax liabilities and assets on a net basis or to realise the assets and settle the liabilities simultaneously, in each future period in which significant amounts of deferred tax liabilities or assets are expected to be settled or recovered.

21 Segment reporting

Each segment is a distinct component of the Group engaged in providing related products or services (business activity-based segments) or delivering products and services within a specific economic environment (geographical segments). Each segment is subject to unique risks and derives benefits distinct from those of other segments. The Group's operations are categorized into two main business segments: building materials (plastics, supplies, and ceramic tiles) and clean water and environmental services within the territory of Vietnam, which primarily generate the Group's revenue and profit. The Group's primary segment reporting is based on business activity segments.

22 Related parties

Parties are considered to be related to the Group if one party has the ability, directly or indirectly, to control the other party or exercise significant influence over the other party in making financial and operating decisions, or where the Group and the other party are subject to common control or significant influence. Related parties may be corporate entities or individuals, include its close family members.
